

Two Audio Amplifiers with Treble and Bass Controls

Item 671, **11 Watt amplifier**
Measures 1 3/4" x 1 3/4" x 1 1/4"

**Shown
actual
size**

(units mount with three #2x56 screws, included)

Item 672, **22 Watt amplifier**
Measures 1 3/4" x 1 3/4" x 3"

These amplifiers are designed for use with our In Locomotive DC Sound Systems in any mode of operation, and our LocoMatic™ Sound and Control Systems. The 11 watt unit can be mounted in "O" gauge and larger type locomotives. The 22 watt requires more space necessitating it to be placed in larger locomotives or for stationary use. Both units operate from 12 to 25 volts DC and have independent treble and bass controls to customize the sound you want. They are introductory priced at \$24.95* for the 11 watt unit (Item #671) and \$34.95* for the 22 watt unit (Item #672). They do require the use of higher power rated speakers. For in locomotive use, items 664 and 665 are good for the 11 watt amplifier. The 22 watt amplifier can also use these speakers if larger units cannot fit but higher rated speakers are desired. As with all smaller speakers, it is possible to destroy them with higher power than they are rated to take.

Regulated Lighting with Adjustable Intensity

Actual size with partial length shown

The RL-Adj (Item #379) offers unique regulated lighting possibilities with cool operation. Besides its long length of 16" and narrow width of 1/2" it is capable of powering eight low voltage lamps with variable regulated intensity (lights don't go up / down in intensity with changes in track voltage). Now you can illuminate your cars to the intensity desired. Dim for sleepers, bright for coaches or whatever you decide to install this into. The unit can also be broken into smaller segments allowing its installation in smaller cars or cabooses. The RL-Adj can be powered from DC, DCC, or AC track power. A fixed source will also do if using this as a stationary building light source. In addition to its benefits of many lights, with cool operation, it also consumes less power than any known lighting board of its kind allowing you to run a longer lighted train without consuming all of the power from your transformer / power source. This unit is configured to be fully compatible with our In Locomotive DC Sound Systems and our LocoMatic™ Sound and Control Systems without adding anything! The RL-Adj comes with four lamps that you can place in any of the 16 mounting positions. The RL-Adj is introductory priced at \$19.95*.

* all orders require PA State sales tax if applicable and a shipping / handling / insurance charge (typically \$7.00). Call for total pricing.
