

Announcing.....

New Sound System, Lighting control, and E-Unit system for really small confined areas.

S-Helper SW9 pictured on S-Helper track

LocoMatic™ DC2d board. Item #452
Measures 1.0" w x 3.0" l x 0.8"h

As pictured above, our new small LocoMatic™ Sound & Control system is now available in a subminiature size capable of driving up to 1 3/4 amperes of motor load. This unit accepts AC or DC input power and operates DC motors. Sound features are an EMD prime mover sound (all eight notches), Brake release, Horn*, and Bell*. The electronic E-Unit comes equipped with momentum starts with selectable start positions. In addition to the E-Unit, outputs are provided for a Front and Rear Headlight, Cab Light*, and a Mars/Strobe Light*. As with all of our LocoMatic™ controlled systems, you can utilize the extra features that a LocoMatic™ system yields such as over-riding sequence operation, control the Headlights, operate the Cab Light*, and Mars/Strobe Light. While this unit was designed for the S-Helper SW8 and SW9 locomotives, it can be retro-fitted into other locomotives as well. Including the BEEP. Since speaker size is determined by the size of the locomotive, it does not come with a speaker. We do have a full line of speakers to choose from. This unit has a limited supply available.

Priced at \$139.95**

Speakers \$8.95 - see our web site or catalog for full selection.

* to operate the Horn and Bell requires the use of a LocoMatic™ controller. This can be an S-Helper Service, Atlas O, or Dallee Electronics unit.

LocoMatic™ is a trademark of Dallee Electronics, Inc.

** all orders require PA State sales tax if applicable and a shipping / handling / insurance charge (typically \$9.60). Call for total pricing.
