

Announcing.....

New models added to our sound system for operators in any gauge.

Sound Systems
with the
"G" operator in
mind.

small footprint:
0.95" x 2.7"

Our popular DC sound system has been modified to operate with the use of magnetic triggers!

This system is offered with various, more popular, sounds. These sounds range from different Diesel prime mover sounds with various Horns to choose from, to Steam locomotives with various whistles, and Electrics.

See our price schedule, catalog, or web site for all versions.

The new units basic features are:

- Universal applications: primarily for those operating in "G" gauge with magnetic activation of the Horn / Whistle and Bell operation. The sound unit is small enough to fit into any HO size engine as well. Or it can be used trackside with magnetic triggers from the engine or car containing the magnet.
- The Horn / Whistle, when activated, plays various different patterns representative of actual patterns the railroads use for operation.
- Sounds operate with reed switches (2 included) located on the engines underside and triggered by passing a magnet located in the track.
- Diesel systems feature full 8 notch operation of the prime mover. Steam systems offer auto-chuff or synchronized chuff via a switch input or utilize our optical reflective sensor.
- Adjustable range of diesel prime mover or steam auto chuff sound vs motor input voltage.
- A full 1.1 watt of audio power available into an 8 ohm speaker (see our web site, catalog, or price schedule for a full range of high efficiency speakers). Amplifiers are also available.
- Wide range of input voltage from as little as 4.5 volts to 35 volts DC maximum. Or from 6 volts to 25 volts AC input power .
- Ultra-miniature mating connectors supplied with 6" of wire.

All units priced at \$109.⁹⁵*

Available from qualified dealers or direct.

* all orders require PA State sales tax if applicable and a shipping / handling / insurance charge (typically \$9.25).
