

24VPS

24 VOLT / 1 Amp

324

REGULATED POWER SUPPLY

#4 or #6
mounting screw

Heatsink - gets warm during normal operation. DO NOT allow the heatsink to come in contact with any other electrical wire or metal. It does connect to the "-" of the DC output power. Allow for adequate ventilation.

If the heatsink becomes super hot you probably have a short or overload connected to the output power. Turn the power off and recheck your connections. Another cause is excessive input voltage.

#4 or #6
mounting screw

INPUT POWER
22 Volts AC max
33 Volts DC max
30VA min

OUTPUT POWER

+
-
Regulated 24 volts DC. Make sure that the "+" goes to the "+" and the "-" to the "-". Damage can occur to the devices if improperly connected!

install wires by stripping insulation back 3/16", place wire in hole, run screw down to clamp in position.
