LED Lighting, regulated

Cool, low power, high Intensity, regulated LED lighting strips. Fits HO and larger. Adjustable length from 2" to 18", depending on unit selected, both only 1/2" wide! Variable regulated intensity. After initial illumination voltage, which is quite low, your lights will remain constant with changes in track voltage. Illuminate your cars to the intensity and hue desired. Dim for sleepers, bright for coaches. Power consumption varies with intensity. Input power from AC, DC, DCC, TMCC, DCS, or other. Wide 120 degree viewing angle thus allowing for illumination in all directions plus the LED's are rated for 100,000 hours of use!. Typical light output for Warm and Cool units are a blinding 74 lumens per board! Amber is a bit less. Add super a cap to the board to obtain up to 30 seconds of lighting after power is removed (varies with intensity setting). You can also use these to illuminate your buildings, roundhouse, train stations, glass show cases, marquis, etc. Many applications!
