

## New STROBE Light!

Our new STROBE features an Incandescent White T1 3/4 (5mm) LED with a super bright output of over 12,000 millicandella lamp power! This is great for the outdoor model railroader as well as indoor. Incandescent White means that it has the color of a standard lamp and not the blueish color associated with other so called "white" LED's.

The STROBE operates from AC, DC, DCC, TMCC, DCS, or any other type of low voltage power. It will power from the rail power or from a 9 volt battery. The STROBE is furnished with a 9 volt battery connector, but it can be easily removed for connecting the input power to another source. It consumes very little power while providing an extremely bright flash in operation.

The STROBE's super bright incandescent White LED can be left attached to the board as delivered or removed and mounted remotely depending on your application. The electronics as well as the LED were proudly designed, manufactured and assembled in the U.S.A. The pricing for either version is \$19.95\*. More details, as always, can be found in our catalog or on our web site.

STROBE - T1 LED, Item # 545

STROBE - T1 3/4 LED, Item #1535

STROBE - end view with LED subdued for picture taking purposes.

Item #1535 shown above.
