

Operation: Both have to stop at stations. "STOP Time" DTT activated by "LMPSET" turning on, turning off "LMPSTP" which allows "Reset Time" DTT to clear its time cycle. When "Stop Time" DTT relates, "LMPSTP" turns back on which activates "Reset Time" DTT for a short time. This activates "LMP RST" which resets both TRAK-DTTLs, thus each MO-1 reapplies power to the track.

Reset Time → No Jumper, Set to 10 o'clock  
 Stop Time → No Jumper, set to 10 or more (CW)
